

ABSTRACT OF THE DISCLOSURE

A coverplate 10 and gearhousing 22 are provided for an electric motor 23. The coverplate 10 includes loop structure 14 and the gearhousing includes guides 28 such that the loop structure engages with the guides in a snap-fit arrangement to secure the coverplate with respect to the gearhousing. The coverplate 10 includes locators 16 extending therefrom and the gearhousing 22 includes grooves 24 such that the locators 16 are received in the grooves 24 when the loop structure and guides are in the snap-fit arrangement so as to prevent rotation of the coverplate with respect to the gearhousing about an axis.
